

## Network Engineer

Come join the Infrastructure team at RStor and help us scale across the globe.

RStor was founded with the mission to connect the world's computing resources. The RStorMulticloud Platform™ is the first to aggregate and automate compute resources from private data centers, public cloud providers, and trusted supercomputing centers on a next generation networking fabric. Headquartered in Saratoga, CA, RStor has raised \$45 million in a series A funding round, led by Cisco Investments. Learn more at <https://rstor.io/>.

At RStor we are building a culture that emphasizes open-minded, collaborative teamwork, and an ability to take responsibility and rise to the challenges of creating major shifts in cloud technology. A demonstrated willingness to step out of your comfort zone and solve problems in new, inventive ways is a must. We're looking for independent thinkers who are comfortable contributing to the larger goals of the team, and nimble enough to adapt to market and data-driven changes.

If you're creative, driven and passionate about applying advanced technology to solve some of the world's biggest and most important problems, you'll be among friends at RStor

### Responsibilities:

- Designing and implementing new network solutions and improving the efficiency of current networks
- Installing, configuring and supporting network equipment including routers, switches, terminal servers, etc.
- Procuring network equipment and managing subcontractors involved with network installation
- Design, deployment, and management of subcontractors involved with short-haul and long-haul fiber, including fiber diversity, redundancy and capacity
- Configuring firewalls, routing and switching to maximize network efficiency and security
- Maximizing network performance through ongoing monitoring and troubleshooting
- Arranging scheduled upgrades
- Investigating faults in the network
- Updating network equipment to the latest firmware releases
- Reporting network status to key stakeholders
- Travel to datacenters

### Job Qualifications:

- Degree and technical background in Computer Science, Computer Engineering, or Information Systems
- A detailed understanding of the following networking technologies: BGP, OSPF, IPv6, SNMP,
- An understanding of QOS, MPLS, Segment Routing etc.
- 8-10+ years related job experience.
- Familiarity with 100G+ routing and switching, long haul fiber, peering, Internet Exchanges, and CSP direct connections
