

Security Engineer

Come join the Infrastructure team at RStor and help us scale across the globe.

RStor was founded with the mission to connect the world's computing resources. The RStorMulticloud Platform™ is the first to aggregate and automate compute resources from private data centers, public cloud providers, and trusted supercomputing centers on a next generation networking fabric. Headquartered in Saratoga, CA, RStor has raised \$45 million in a series A funding round, led by Cisco Investments. Learn more at <https://rstor.io/>.

At RStor we are building a culture that emphasizes open-minded, collaborative teamwork, and an ability to take responsibility and rise to the challenges of creating major shifts in cloud technology. A demonstrated willingness to step out of your comfort zone and solve problems in new, inventive ways is a must. We're looking for independent thinkers who are comfortable contributing to the larger goals of the team, and nimble enough to adapt to market and data-driven changes.

If you're creative, driven and passionate about applying advanced technology to solve some of the world's biggest and most important problems, you'll be among friends at RStor

Responsibilities:

- Design, implement, and monitor security measures for the protection of our production network, servers, and data
- Identify and define system security requirements
- Prepare, document, and implement standard operating procedures and protocols
- Configure and troubleshoot security infrastructure devices
- Develop technical solutions and new security tools to help mitigate security vulnerabilities and automate repeatable tasks
- Participate in emergency response team for any site related issues
- Align operationally with security standards for compliance and audit
- Develop your role as a company expert in matters concerning security.

Job Qualifications:

- Degree and technical background in Computer Science, Computer Engineering, or Information Systems
- 10 years related job experience
- A detailed understanding of: firewalls, system hardening, ID management, intrusion detection, DDoS prevention, encryption, vulnerability assessment, and security compliance
- Understands and performs the Secure development lifecycle process
