

TAPE TO CLOUD

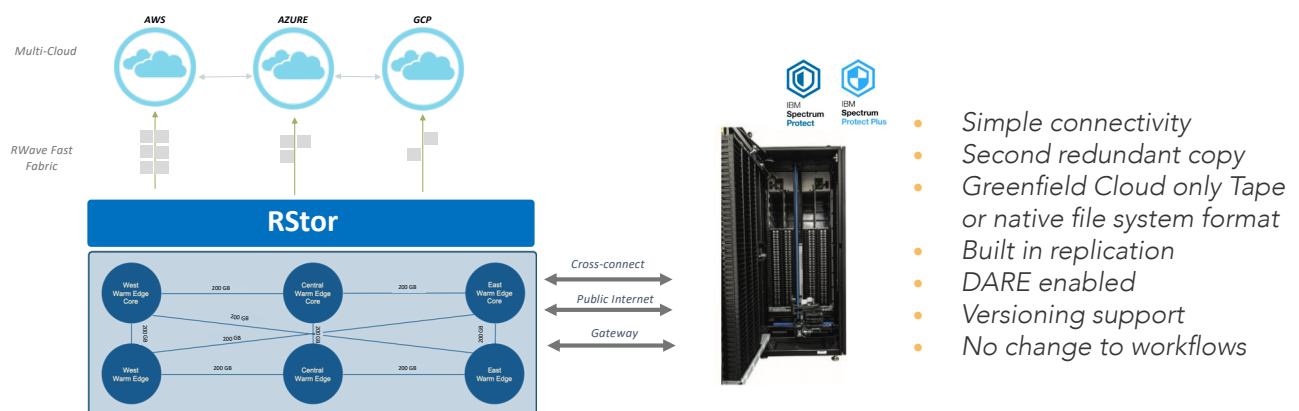

A secure way to migrate mainframe workloads to the Cloud

RStor

RStorage

- Is a software approach complementary to tape manufacturers and software vendors
- Works with existing backup software manufacturers
- Makes managing tapes and archives seamless to the corporate IT professional
- Is a cost-effective alternative to offsite storage (compared with Iron Mountain and Glacier)
- Allows users to instantly retrieve their data (Iron Mountain takes days in most cases to return a tape; Glacier can take hours if not days)

RStor Tape to Cloud Solution

Advantages of a Cloud Workflow

- Cloud Storage is an economical element in mainframe workflows
- Cloud provides no touch geo redundancy mitigating the risk of data loss from hardware failures; advanced search capabilities; and eliminating technology refresh cost
- Cloud is secure both in transit and at rest, data in transit is managed through secure protocols – Stored data is encrypted by providers and customers
 - Customers can add their own encryption keys for an extra layer of security
